#### **Summary of Assessed Value and Property Costs Estimates**

The interest being appraised for this estimate is fee simple for the purchase of the site, and the value of this interest is subject to the normal limiting conditions and the quality of market data. An appraisal of the parcel was estimated using three traditional approaches, cost, income capitalization and sales comparison. Each is based on the principal that an informed purchaser would pay no more for the rights in acquiring a particular real property than the cost of acquiring, without undue delay, an equally desirable one. Three properties from within 3 miles of this property were selected for comparison, each with similar site characteristics, utility availability, zoning classification and road access. No inspection was made of the property or comparables used in the report and the appraiser relied upon information provided by program staff. Conclusions are limited only by the reported assumptions and conditions that no other known or unknown adverse conditions exist. Pursuant to the Conservation Collier Purchase Policy, one appraisal is required.

Assessed Value: \* \$75,000

Estimated Market Value: \*\* \$90,000 There are no TDRs associated with this parcel.

# II. Statement for satisfying Initial Screening Criteria, Including Biological and Hydrological Characteristics

Collier County Environmental Resources Department staff conducted a site visit on September 2, 2005.

#### MEETS INITIAL SCREENING CRITERIA Yes

1. Are any of the following unique and endangered plant communities found on the property? Order of preference as follows: Ord. 2002-63, Sec. 10 (1)(a)

ix.	Other native habitats	Yes
viii.	Tidal freshwater marsh	No
vii.	High marsh (saline)	No
vi.	Riverine Oak	No
ν.	Xeric pine	No
iv.	Native beach	No
iii.	Coastal strand	No
ii.	Xeric oak scrub	No
i.	Hardwood hammocks	No

#### **Vegetative Communities:**

Staff used two methods to determine native plant communities present; review of South Florida Water Management District (SFWMD) electronic databases for Department of Transportation's Florida Land Use, Cover and Forms (FLUCCS) (1994/1995) and field verification of same.

#### **FLUCCS:**

The electronic database identified:

• FLUCCS 211 – Improved Pasture

The following native plant communities were observed:

• FLUCCS 411 – Pine Flatwoods

The eastern half of the property is composed of pine flatwoods. The western half is previously cleared improved pasture with some native and exotic plant recruits. The parcel is separated into two halves by what appears to be an old agricultural ditch.

#### **Characterization of Plant Communities present:**

Pine Flatwoods -

<u>Ground Cover:</u> redroot (*Lachnanthes caroliniana*), black root (*Pterocaulon pychnostachium*), hat pins (*Eriocaulon decangulare*), candyroot (*polygala nana*), paw paw (*Asimina* spp.), St. John's wart (*Hypericum* spp.), blueberry (*Vaccinium* spp.), tarflower (*Bejaria racemosa*), running oak (*Quercus elliottii*), gopher apple (*Licania michauxii*), rosemary (*Ceratiola ericoides*), beakrush (*Rhynchospora* spp.), yellow eyed grass (*Xyris* spp.), grasses

Folio #: 00100520008 Name: Snow *Date: October 10, 2005* 

Midstory: saw palmetto (Serenoa repens), rusty lyonia (Lyonia ferruginea), wax myrtle (Myrica cerifera), myrsine (Rapanea punctata), gallberry (Ilex glabra), dahoon holly (*Ilex cassine*), American beautyberry (*Callicarpa americana*), Canopy: slash pine (Pinus elliottii)

Sparse vegetation present in fallow agriculture land and ditches includes:

Slash pine (Pinus elliottii), sand live oak (Quercus geminata), live oak (Quercus virginiana), willow (Salix caroliniana), cabbage palm (Sabal palmetto), bushy broom grass (Andropogon glomeratus), dog fennel (Eupatorium capillifolium), pepper vine (Ampelopsis arborea), primrose willow (Ludwigia spp.), yellow eyed grass (Xyris spp.) – exotics = yellow nut sedge (Cyperus esculentus), Brazilian pepper (Schinus terebinthifolius) and java plum (Syzygium cumini)

#### **Statement for satisfaction of criteria:**

These data indicate that pine flatwoods, and intact native plant community, exists on the parcel.

2. Does land offer significant human social values, such as equitable geographic distribution, appropriate access for nature-based recreation, and enhancement of the aesthetic setting of Yes, marginally Collier County? Ord. 2002-63, Sec. 10 (1)(b)

#### Statement for satisfaction of criteria:

The property is in an area where no Conservation Collier land has yet been acquired. Although the property is not visible from a public roadway, it is accessible through the adjacent Wojtys parcel being offered in this cycle, which is on a privately owned and maintained road (Lilac Lane). Half of this parcel is a very fine example of a pine flatwood community. An unimproved access easement extending from Lilac Lane appears to run along the southern boundary of the parcel.

3. Does the property offer opportunities for protection of water resource values, including aquifer recharge, water quality enhancement, protection of wetland dependant species Yes, marginally habitat, and flood control? Ord. 2002-63, Sec. 10 (1)(c)

General Hydrologic Characteristics observed and description of adjacent upland /wetland buffers:

Wetland dependent plant species (OBL/ FACW) observed:

OBL	FACW
dahoon holly ( <i>Ilex cassine</i> )	St. John's wart (Hypericum spp.)
yellow eyed grass ( <i>Xyris</i> spp.)	hat pins (Eriocaulon decangulare)
willow (Salix caroliniana)	Bushy broom grass (Andropogon glomeratus)
Primrose willow (Ludwigia spp.)	

Wetland dependent wildlife species observed: Oak toad

#### Other Hydrologic indicators observed: none

**Soils:** Soils data is based on the Soil Survey of Collier County Area, Florida (USDA/NRCS, 1990). Mapped soil on this parcel was identified as Immokalee fine sand, which is found in flatwoods. Vegetation normally associated with this non-hydric soil includes: slash pine, saw palmetto, wax myrtle, chalky bluestem, creeping bluestem and pineland threeawn. The eastern half of the property contains similar vegetation. This soil normally will remain wet during the wet season and become very dry during the dry season.

**Lower Tamiami recharge Capacity:** Relatively low - 7 to < 14 inches annually

**Surficial Aquifer Recharge Capacity:** Moderate - 43 to < 56 inches annually

**FEMA Flood map designation:** Zone D, area located outside special flood hazard area

#### **Statement for satisfaction of criteria:**

Although the site contributes to aquifer recharge and contains some wetland plants, it does not appear to contain wetlands. Standing water was observed in the ditches during the site visit. It is reasonable to assume that the property holds water in the ditches during rain events.

4. Does the property offer significant biological values, including biodiversity, listed species habitat, connectivity, restoration potential and ecological quality?

Ord. 2002-63, Sec. 10 (1)(d)

Yes, Marginally

#### **Listed Plant Species:**

Listed plant species include those found on either the Endangered and Threatened Wildlife and Plants 50 CFR 17.11 and 17.12, December 1999 (FWS) or the Florida Department of Agriculture, August 1997 (FDA).

The following listed plant species were observed:

COMMON NAME	SCIENTIFIC NAME	STATUS	
		FDA	FWS
common wild pine	Tillandsia fasciculata	Е	
wild coco	Eulophia alta	T	

E=Endangered, T=Threatened, C=Commercially Exploited

#### **Listed Wildlife Species:**

Listed wildlife species include those found on either the Endangered and Threatened Wildlife and Plants 50 CFR 17.11 and 17.12, December 1999 (FWS) or the Florida Fish and Wildlife Conservation Commission (FWCC) (formerly the Florida Game and Freshwater Fish Commission), August 1997 (identified on official lists as GFC).

No listed wildlife species were observed on site.

#### Bird Rookery observed?

No

#### FWCC-derived species richness score:

Ranges from 4-5 out of 10

#### Non-listed species observed:

Unidentified striped skink and unidentified frog

#### **Potential Listed Species:**

Gopher tortoise (*Gopherus polyphemus*) scat was observed on site, but no burrows were observed. Gopher tortoises most likely utilize the parcel. Property is within Priority 2 Florida panther habitat.

#### Statement for satisfaction of criteria:

The eastern half of the site appears to have high ecological quality. It contains high quality pine flatwoods with no observed invasive exotic vegetation. It most likely contains gopher tortoises and their commensal species. The entire property is also located within Priority 2 Florida panther habitat.

5. Does the property enhance and/or protect the environmental value of current conservation lands through function as a buffer, ecological link or habitat corridor?

Ord. 2002-63, Sec. 10 (1)(e)

No

#### Statement for satisfaction of criteria:

There is no known ecological link or habitat corridor.

Is the property within the boundary of another agency's acquisition project?

No

If yes, will use of Conservation Collier funds leverage a significantly higher rank or funding priority for the parcel?

N/A

Without such funding circumstances, Conservation Collier funds shall not be available for purchase of these lands. Ord. 2002-63, Sec.  $10\ (1)(f)$ 

# III. Potential for Appropriate Use and Recommended Site Improvements

This use assessment will assume that 3 adjacent 5-acre parcels (both Wojtys properties and Snow) would be purchased together

#### Potential Uses as Defined in Ordinance 2002-63, section 5.9:

#### Hiking:

A short hiking trail could be developed here.

#### **Nature Photography:**

There may be opportunities for wildlife and vegetation photography on this and adjacent sites.

#### **Bird-watching:**

Birds normally found in pine flatwoods and palmetto might be observed at this site.

#### **Kayaking/Canoeing:**

N/A

#### **Swimming:**

N/A

#### **Hunting:**

N/A

#### Fishing:

N/A

#### **Recommended Site Improvements:**

A trail would need to be cleared through the site. A parking area, fence and signage would need to be installed.

### IV. Assessment of Management Needs and Costs

Management of this property will assume that 3 adjacent 5-acre parcels would be purchased together and will address the costs of exotic vegetation removal and control, the development of a parking area and short trail to allow the public to have access to the property and fence installation. The following assessment addresses both the initial and recurring costs of management. These are very preliminary estimates; Ordinance 2002-63 requires a formal land management plan be developed for each property acquired by Conservation Collier.

#### **Exotic, Invasive Plants Present:**

Primrose willow (Ludwigia spp.), yellow nut sedge (Cyperus esculentus) and one java plum (Szygium cumini)

#### **Exotic Vegetation Removal and Control**

The initial cost of exotic removal would be relatively low. Based on cost estimates provided by a contractor who routinely contracts with the County parks and Recreation Department for exotic removal, costs for the level of infestation observed (25%) to treat exotics with herbicide in place or to cut and stack the debris onsite would be \$2,000 per acre. Costs to cut, treat and remove biomass would range from \$2,500-\$3,000 per acre.

Based on the acreage involved, total initial removal costs could range from \$10,000 -\$15,000 for the entire parcel. Costs for follow-up maintenance, done anywhere from quarterly to annually have been estimated at between \$100 and \$450 per acre, per year for a total of \$500 to \$2,250 for 5 acres. These costs would likely decrease over time as the soil seed bank is depleted.

#### **Public Parking Facility:**

The 3 properties together would require an area for visitor parking once a trail is developed. This parcel is adjacent to the road and is already cleared, making it the logical location to place parking. The cost of construction of a shell or gravel parking lot to accommodate approximately 10 cars today would be approximately \$15,000.

This value would include

- Land preparation
- Design
- Permitting costs

#### **Public Access Trails:**

A short trail with handicapped accessible portion can be constructed.

#### **Security and General Maintenance:**

It would be desirable to fence the property with a type of fencing that would identify boundaries, yet allow wildlife free movement across it. Field fencing, similar to that used by FL DOT along I-75 could be used at boundaries. Cost including installation for field fencing is approx. \$3.00 per foot. A gate is approximately \$250.

Table 2. Summary of Estimated Management Needs and Costs (assuming purchase of the entire 15 acres including the two Wojtys lots and the Snow lot)

<b>Management Element</b>	Initial Cost	Annual Recurring Costs	Comments
Exotics Control	\$15,000	\$2,250	Yearly maintenance
Parking Facility	\$15,000		Today's costs
Access Trails ADA trail section	\$3,000. \$16,500	t.b.d.	A trail would be feasible if all three adjacent lots were purchased and previously cleared areas contained parking.  ADA trail section approx. 500 feet @ \$33 (estimated) per foot.
Fencing	\$6,250	t.b.d.	Field fencing - \$3 per foot X 2,000 ft. Gate- Approx. \$250
Trash Removal	t.b.d.	t.b.d.	Large items to be done one a lump sum contract basis with cost being site specific  Small items and routine trash barrel emptying can be done by contract/patnership
Entry Sign (1)  Boundary signs (3)	\$400 \$75	t.b.d.	Entry sign (1) - under 36 sq. feet - uninstalled - \$400 each Boundary signs (3) – uninstalled
			includes post - \$25 each
Kiosk	\$14,000	t.b.d	Based on 2004 Palm Beach County actual costs
Rest room under 500 sq. feet	\$100,000	t.b.d	Estimate – includes septic, water, electricity and well.
Picnic table, 2 benches, 2 garbage cans	\$3,000	t.b.d.	Recycled plastic, uninstalled
Total	\$173,225	\$2,250	

t.b.d. To be determined; cost estimates have not been finalized.

### V. Potential for Matching Funds

The primary partnering agencies for conservation acquisitions, and those identified in the ordinance are the Florida Communities Trust (FCT), The Florida Forever Program and the Save Our Rivers Program. The following highlights potential for partnering funds, as communicated by agency staff:

#### **Florida Communities Trust:**

Potential does exist for a grant; however, these grants are offered on a yearly cycle and are rarely coordinated with purchases to provide up-front partner funding. Application is typically made for pre-acquired sites. Each recipient is limited to a maximum of ten percent (10%) of the available bond proceeds. For the 2004 funding cycle the award limit per recipient, per cycle, was \$6.6 million. The next funding cycle closes in June of 2004. Multiple applications may be made, as long as the total amount requested does not exceed the 10% award maximum. Collier County, with a population exceeding 75,000, is required to provide a minimum match of twenty-five percent (25%) of the total for each project cost.

A cursory test scoring of this parcel with FCT criteria by staff gives the Wojtys/Snow trio of parcels a score of 95 out of a possible 320 points. In order to estimate this score, staff considered the 3 adjoining parcels together, assumed a minimum match of 55% and that a restroom facility would be constructed on the parcel which would provide trailhead facilities in close proximity to a planned greenway and trail route. These facilities add considerable cost to the project, and still do not result in probability for funding. Staff was verbally advised that if a score is under 125, chances of it being selected for funding are not likely. This parcel appears to be below the minimum mark for possibility of selection for FCT post-acquisition funding.

#### Florida Forever Program:

Staff was verbally advised that the Florida Forever Program is concentrating on larger, more rural parcels, unless those parcels are inside an existing acquisition boundary. This parcel is not inside a Florida Forever project boundary

#### Save Our Rivers Program / South Florida Water Management District:

SFWMD staff has advised that none of our current parcels is within a SFWMD project boundary and funding partnerships are unlikely unless that is the case.

### VI. Summary of Secondary Screening Criteria

Staff has scored property on the Secondary Criteria Screening Form and attached the scoring form as Exhibit A. A total score of 135 out of a possible 400 was achieved. The chart and graph below show a breakdown of the specific components of the score.

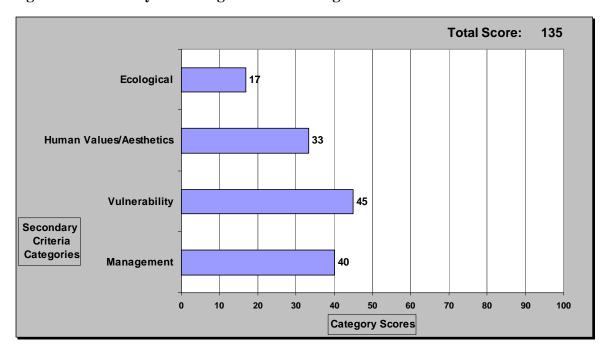

**Table 3. Tabulation of Secondary Screening Criteria** 

			Percent of
	Possible	Scored	Possible
Secondary Screening Criteria	Points	Points	Score
Ecological	100	17	17%
Human Values/Aesthetics	100	33	33%
Vulnerability	100	45	45%
Management	100	40	40%
Total Score:	400	135	34%

Percent of Maximum Score:

34%

Figure 4. Secondary Screening Criteria Scoring

#### **Summary of factors contributing to score**

Folio #: 00100520008

*Date: October 10, 2005* 

#### Total Score – 135 out of 400

#### Ecological (17):

This low score resulted from the lack of unique and endangered plant community presence, absence of wetlands, only moderate surficial aquifer recharge capacity, a low species richness score, only one type of vegetative community present and the need for moderate restoration to return the property to high ecological function.

#### **Human Values/Aesthetics (33):**

This parcel has unimproved easement access, but no direct access. As a result, the score is low. If the other parcels are also considered, there would be direct access by a private, unpaved road. Additionally, if considered by itself, the size limits its recreational opportunities, but if considered together, a higher score would result. This parcel scored slightly lower than Wojtys, because only half of it contains high quality pine flatwoods.

#### **Vulnerability (45):**

Vulnerability is moderate due to the limited ability to place one single family home on this property. No permits have been obtained for development of this property.

#### Management (40):

The parcel scored relatively low in this section because the farm furrows and ditches must be graded and the exotic vegetation must be managed. Some points were also lost because the surrounding properties contain exotic vegetation seed sources and may also preclude the use of prescribed fire as a management tool.

<u>Parcel Size: 5 acres</u> While parcel size was not scored, the ordinance advises that based on comparative size, the larger of similar parcels is preferred. This parcel is similar to the Narsiff-1 parcel (same size) and the Brochu and Anderson parcels (both twice the size).

### Score assuming a 3 parcel purchase:

3. Vulnerability to Development/Degradation			
3. Vullierability to Development Degradation	Possible	Scored	
3.A Zoning/Land Use Designation	points	points	Comments
Zoning allows for Single Family, Multifamily, industrial or commercial	50		
2. Zoning allows for density of no greater than 1 unit per 5 acres	45	45	A-MHO In RFMU neutral lands - 1 per 5 acres density allowed
3. Zoning allows for agricultural use /density of no greater than 1 unit	40		
Zoning favors stewardship or conservation	0		
5. If parcel has ST overlay, remove 20 points	-20		
6. Property has been rezoned and/or there is SDP approval	25		
7. SFWMD and/or USACOE permit has been issued	25 15		
8. A rezone or SDP application has been submitted     9. SFWMD and/or USACOE permit has been applied for	15		
9. SEWIND and/or OSACOE permit has been applied for	15		
3. Vulnerability Total Score	100	45	
3. Vullierability Total Score	100	40	
4. Feasibility and Costs of Management			
4.A Hydrologic Management Needs	Possible points	Scored points	Comments
1. No hydrologic changes are necessary to sustain qualities of site in			
perpetuity	100		
Minimal hydrologic changes are required to restore function, such     which are existing to some such as a suitable of the second such as a suitable of the seco			
a cut in an existing berm	75		
Moderate hydrologic changes are required to restore function, such as removal of existing berms or minor re-grading that require			
use of machinery	50		
doc of machinery	30		
4. Significant hydologic changes are required to restore function,			
such as re-grading of substantial portions of the site, placement of a			
berm, removal of a road bed, culvert or the elevation of the water			Removal of farm furrows over half the property and removal of
table by installing a physical structure and/or changes unlikley	0	0	ditch along half of northern boundary
5.A Total	100	0	
4.B Exotics Management Needs	Possible points	Scored points	Comments
Exotic Plant Coverage	ponno	pomito	
a. No exotic plants present	100		
b. Exotic plants constitute less than 25% of plant cover	80	80	Primrose willow; exotic sedges, one Java plum
c. Exotic plants constitute between 25% and 50% of plant cover	60		
d. Exotic plants constitute between 50% and 75% of plant cover	40		
e. Exotic plants constitute more than 75% of plant cover	20		
maintenance effort and management will be needed (e.g., heavy infestation by air potato or downy rosemytle)	-20		
g. Adjacent lands contain substantial seed source and exotic	-20		Adjacent fallow farm fields provide source for exotic sedges and
removal is not presently required	-20	-20	grasses
5.B Total	100	60	9
	Possible	Scored	
4.C Land Manageability	points	points	Comments
Parcel requires minimal maintenance and management,			
examples: cypress slough, parcel requiring prescribed fire where fuel			
loads are low and neighbor conflicts unlikely	80		
	- 00		
2. Parcel requires moderate maintenance and management,			
examples: parcel contains trails, parcel requires prescribed fire and			Pine flatwoods require fire management. Neighbor conflicts from
circumstances do not favor burning	60	60	surrounding residential properties would not favor burning
Parcel requires substantial maintenance and management,			
examples: parcel contains structures that must be maintained,			
parcel requires management using machinery or chemical means	, .		
which will be difficult or expensive to accomplish  4. Add 20 points if the mainenance by another entity is likely	40 20		
4. Add 20 points if the maineriance by another entity is likely	20		
5. Subtract 10 points if chronic dumping or trespass issues exist	-10		
5.C Total	100	60	
4. Feasibility and Management Total Score	100	40	Sum of 5A, 5B, 5C, then divided by 3
Total Score	400	135	
		1.3.7
