I. Summary of Property Information

The purpose of this section is to provide information concerning the subject property describing its various physical characteristics and other general information.

Table 1. Summary of Property Information

Characteristic	Value	Comments
Name	Parcels in McIlvane	16 Parcels nominated in entire project area
	Marsh Area	located in Sections 29 and 30, Township 51 and
		Range 27
Folio Number	Various	See next page for complete listing
Target	None	Area not located in a TPA. Inside area
Protection		designated as Conservation on Future Land Use
Area		Map
Size	2.02 to 80 acres	Current applications 222.58 acres – 8 parcels
		Entire Project is 404 acres – 16 parcels
STR	S 29 & 30, T 51 and R 27	n/a
Zoning	Agriculture	No TDRs are associated with this project area.
Category/TDRs		Development – 1 unit per 5 acres or Ag uses
		consistent with Right To Farm Act. Parcels are
		within Conservation designated area on Future
	7 15	Land Use Map
FEMA Flood	Zone AE	Area located within Special Flood Hazard Area
Map Category		- requires building foundation 6 feet above
E-righting	None	ground level.
Existing structures	None	n/a
Adjoining	Conservation, Park,	Collier Seminole State Park borders the E side
properties and	Agriculture and PUD	of the project, The 10,000 Islands National
their Uses	Agriculture and 1 OD	Wildlife Refuge borders to the SW & Deltona
then Oses		Mitigation Lands border to the W. Parcels to the
		N are owned by Fiddler's creek - zoned PUD.
		Others are owned by private property owners &
		zoned Ag. Three parcels within the project area,
		comprising 310.4 acres, are being deeded to
		Rookery Bay for mitigation.
Development	None submitted	n/a
Plans		
Known	FDOT & CCMPO	Florida Dept. of Transportation and Collier
Property	road study	County Metropolitan Planning Organization
Irregularities		study to occur on road construction between US
		41 and SR 92
Other County	Utilities/Trans	No interest stated
Dept Interest

Summary of Assessed Value and Property Costs Estimates

The interest being appraised for this estimate is fee simple for the purchase of the site, and the value of this interest is subject to the normal limiting conditions and the quality of market data. An appraisal of the parcel was estimated using three traditional approaches, cost, income capitalization and sales comparison. Each is based on the principal that an informed purchaser would pay no more for the rights in acquiring a particular real property than the cost of acquiring, without undue delay, an equally desirable one. Three properties from within 3 miles of this property were selected for comparison, each with similar site characteristics, utility availability, zoning classification and road access. No inspection was made of the property or comparables used in the report and the appraiser relied upon information provided by program staff. Conclusions are limited only by the reported assumptions and conditions that no other known or unknown adverse conditions exist. Pursuant to the Conservation Collier Purchase Policy one appraisal is required for each offered parcel.

II. Statement for satisfying Initial Screening Criteria, Including Biological and Hydrological Characteristics

Folios - Various

Date: October 9, 2006

Collier County Environmental Services Department staff conducted an aerial flyover site visit on May 2, 2006 and a ground site visit to Curcie Road on May 30, 2006.

MEETS INITIAL SCREENING CRITERIA Yes

1. Are any of the following unique and endangered plant communities found on the property? Order of preference as follows: Ord. 2002-63, Sec. 10 (1)(a)

i.	Hardwood hammocks	No
ii.	Xeric oak scrub	No
iii.	Coastal strand	No
iv.	Native beach	No
ν.	Xeric pine	No
vi.	Riverine Oak	No
vii.	High marsh (saline)	YES
iii.	Tidal freshwater marsh	No
ix.	Other native habitats	YES

Vegetative Communities: Staff used two methods to determine native plant communities present; review of South Florida Water Management District (SFWMD) electronic databases for Department of Transportation's Florida Land Use, Cover and Forms (FLUCCS) (1994/1995) and field verification of same.

FLUCCS:

The electronic database identified:

- FLUCCS 612- Mangrove Swamps
- FLUCCS 616- Inland Ponds or Sloughs
- FLUCCS 642- Saltwater Marshes
- FLUCCS 617- Wetland hardwood forest, mixed wetland
- FLUCCS-411- Pine Flatwoods

The following native plant communities were observed:

- FLUCCS 642- Saltwater Marshes
- FLUCCS 612- Mangrove swamps
- FLUCCS 411- Pine Flatwoods
- FLUCCS 616- Inland Ponds or Sloughs

Characterization of Plant Communities present:

Ground Cover: Mangrove areas do not appear to have ground cover. Scattered upland areas may contain ground cover similar to that observed on parcels located off Curcie Road along eastern side of project area. Plants observed include: beakrush (*Rhynchospora sp.*), leather fern (*Arostichum spp.*), swamp fern (*Blechnum serrulatum*), and white beggar-ticks (*Bidens alba*).

Midstory: red mangroves (*Rhizophora mangle*), black mangroves (*Avicennia germinans*), buttonwood (*Conocarpus erectus*), winged sumac (*Rhus copallina*), myrsine (*Myrsine floridana*), saltbush (*Baccharis angustifolia and B. halimifolia*), wax myrtle (*Myrica*

cerifera) and scattered small cabbage palms (Sabal palmetto).

Folios - Various

Date: October 9, 2006

<u>Canopy:</u> An approximate 15-acre area of slash pine and several acres of wetland hardwoods are identified in the electronic FLUCCS record. Observation along the north side of the project area looking eastward, off Curcie Road, showed a small patch of slash pine and scattered individual pines in the distance. Inland ponds were observed from the air.

<u>Statement for satisfaction of criteria:</u> This data indicates that native plant communities do exist on the parcels. Not all mapped vegetative communities were directly observed due to problems accessing all areas.

2. Does land offer significant human social values, such as equitable geographic distribution, appropriate access for nature-based recreation, and enhancement of the aesthetic setting of Collier County?

Ord. 2002-63, Sec. 10 (1)(b)

YES

<u>Statement for satisfaction of criteria:</u> Conservation Collier does not own lands in this area, so a purchase here would constitute a wider geographic distribution in relation to other acquired preserves. Much of the project area is inaccessible by land; however, a small dock or ramp could easily provide canoe and kayak access. Acquisition of the parcel along the eastern edge of the project area, which is owned by RJS LLC, is critical to providing public access. This parcel would provide access to the area from Curcie road, a paved public right-of-way.

3. Does the property offer opportunities for protection of water resource values, including aquifer recharge, water quality enhancement, protection of wetland dependant species habitat, and flood control? Ord. 2002-63, Sec. 10 (1)(c)

YES

General Hydrologic Characteristics observed and description of adjacent upland /wetland buffers: The entire area appeared to be mangrove and salt flats with small ponds scattered throughout.

Wetland dependent plant species (OBL/ FACW) observed:

OBL	FACW
black mangrove (Avicennia germinans)	beakrush (Rhynchospora sp.) (some species
	are OBL)
red mangrove (Rhizophora mangle)	buttonwood (Conocarpus erectus)
leatherfern (Acrostichum sp.)	swamp fern (Blechnum serrulatum)
willow (Salix sp.)	

Wetland dependent wildlife species observed: Large white birds were observed throughout the area during aerial flyover.

Folios - Various

Date: October 9, 2006

Other Hydrologic indicators observed: Pond water level drawdown was observed during the aerial flyover. High water marks were observed on red mangrove prop roots on the ground.

Soils: Soils data is based on the Soil Survey of Collier County Area, Florida (USDA/NRCS, 1990). The following soil types were identified:

- 40-**Durbin and Wulfert Mucks** (70%)-Frequently Flooded- typically found in poorly drained tidal mangrove swamps
- 53-**Estero and Peckish soils**, (25%) Frequently Flooded- typically found in poorly drained tidal marshes
- 56-**Basinger FS**, (5%) Occasionally flooded- a nearly level, poorly drained soil is on occasionally flooded low ridges that are surrounded by tidal marshes

Lower Tamiami recharge Capacity: Insignificant to below levels "-16 to 1" - indicating a wetland or discharge area.

Surficial Aquifer Recharge Capacity: Moderate to substantial - "43 to < 56 "annually.

FEMA Flood map designation: The property is within Flood Zone AE - 5, identified as a Special Flood Hazard Area. The base flood elevation is 5 feet.

Statement for satisfaction of criteria:

This site contains coastal wetlands that provide habitat for wetland dependent species and protects developed properties to the north from hurricane storm surge. The plants, animals and soils in coastal salt marshes also absorb, filter and neutralize many pollutants before they can reach nearby marine and estuarine communities. These parcels also provide moderate to substantial surficial aquifer recharge.

4. Does the property offer significant biological values, including biodiversity, listed species habitat, connectivity, restoration potential and ecological quality?

Ord. 2002-63, Sec. 10 (1)(d) Yes

Listed Plant Species: Listed plant species include those found in Florida Administrative Code (F.A.C.) Section 5B-40.0055 Regulated Plant Index and in the Endangered and Threatened Wildlife and Plants 50 CFR 17.11 and 17.12, December 1999, 50 CFR17.11 and 17.12. No listed plant species were observed during the aerial flyover or ground site visit.

Listed Wildlife Species: Listed wildlife species include those found on the Endangered and Threatened Wildlife and Plants 50 CFR 17.11 and 17.12, December 1999 (FWS) or the Florida Fish and Wildlife Conservation Commission (FWCC) Florida's Endangered Species, Threatened Species, and Species of Special Concern, 29 January, 2004. The

Folios - Various Date: October 9, 2006

following listed species have been observed by program staff and previously by Rookery Bay National Estuarine Research Reserve Staff:

COMMON NAME	SCIENTIFIC NAME	,	STATUS
		GFC	FWS
American alligator	Alligator	SSC	T
	mississippiensis		
Florida ribbon snake	Thamnophis sauritus		T
	sackeni		
Osprey	Pandion haliaetus		SSC
Snowy egret	Egretta rufescens		SSC
Silverside (not <u>sure</u> this	Menidia spp.	T	
is Key Silverside)			
Tri-colored heron	Egretta tricolor		SSC

SSC= Species of Special Concern / T= Threatened

Bird Rookery observed? Not directly, however Rookery Bay staff has observed evidence of at least one bird roosting site.

FWCC-derived species richness score: The score ranged from 3 to 10 over the entire project area.

Non-listed species observed: Program staff observed a turkey vulture, a northern cardinal, and a boat-tailed grackle. Rookery Bay staff has provided species survey lists from the McIlvane Marsh area listing observations of black racer, tracks from bobcat, otter, opossum and raccoon, rabbit scat, several species of turtle, and numerous fish species. Additional wildlife sightings compiled by the Rookery Bay National Estuarine Research Reserve (RBNERR) are provided in data tables which have been incorporated to this report (**See Table 6**).

Potential Listed Species: The observed habitat and location would also support the presence of the following listed species: American crocodile (*Crocodylus acutus*), FWC and USFWS (E), white ibis (*Eudocimus albus*) FWC (SSC), roseate spoonbill (*Platalea ajaja*), FWC (SSC), woodstork (*Mycteria americana*) FWC and USFWS (Endangered), little blue heron (*Egretta caerulea*) FWC (SSC), brown pelican (*Pelecanis occidentalis*) FWC (SSC), and other listed wading birds.

Statement for satisfaction of criteria:

The site appears to have high ecological quality and contains habitat suitable for many listed and non listed species. It may support above average biodiversity. While it is not known whether there are listed plants present, it is likely the area contains at least the listed but locally common bromeliads.

5. Does the property enhance and/or protect the environmental value of current conservation lands through function as a buffer, ecological link or habitat corridor?

Ord. 2002-63, Sec. 10 (1)(e)

YES

Folios - Various

Date: October 9, 2006

Statement for satisfaction of criteria:

The McIlvane Marsh is directly connected to Collier Seminole State Park, 10,000 Islands National Wildlife Refuge (NWR), Deltona settlement lands and through them to the Rookery Bay National Estuarine Research Reserve (RBNERR). Acquisition of these lands will buffer, connect and protect the environmental value of current conservation lands surrounding.

Is the property within the boundary of another agency's acquisition project?

NO, however, the US Fish and Wildlife Service, 10,000 Islands NWR, is interested in a possible boundary adjustment to include these parcels through a post acquisition partnership or purchase. RBNERR is also interested in pursuing a boundary adjustment for purposes of a management partnership.

If yes, will use of Conservation Collier funds leverage a significantly higher rank or funding priority for the parcel? n/a; However, a purchase by Conservation Collier while willing sellers are identified may provide the time necessary for potential federal funding partners to gain approval for a post acquisition partnership or outright re-purchase from Conservation Collier.

Without such funding circumstances, Conservation Collier funds shall not be available for purchase of these lands. Ord. 2002-63, Sec. 10 (1)(f)

III. Potential for Appropriate Use and Recommended Site Improvements

Folios - Various

Date: October 9, 2006

Potential Uses as Defined in Ordinance 2002-63, section 5.9:

Hiking: There are limited opportunities for hiking due to wet conditions. Future management could include construction of a boardwalk.

Nature Photography: Current lack of access would limit opportunities for nature photography; however, future developed access could provide opportunities.

Bird-watching: While there is utilization of this area by wading birds, current lack of access would limit opportunities for bird watching. Future developed access could provide opportunities.

Kayaking/Canoeing: Possibly during wet season only. A direct water route from Curcie Road to the Gulf may not exist during dry season.

Swimming: Swimming is not an appropriate use.

Hunting: Hunting is not a considered use for these parcels.

Fishing: Fishing opportunities in the marsh itself would be limited due to the shallow nature of the wetlands; however, there are man-made ponds on the eastern side that could be utilized for fishing. Curcie Rd. provides access to this area.

Recommended Site Improvements: Future recommended site improvements would include removal of any observed exotic vegetation, possible improvement of an existing unpaved access road (extending from Curcie Rd. into the project area), a parking area and a wildlife observation boardwalk.

IV. Assessment of Management Needs and Costs

Folios - Various

Date: October 9, 2006

Management of this property will address the cost and partnership potential for exotics removal and control and site security via fencing of unpaved access roads. The following assessment addresses both the initial and recurring costs of management. These are very preliminary estimates; Ordinance 2002-63 requires a formal land management plan be developed for each property acquired by Conservation Collier.

Exotic, Invasive Plants Present: Scattered Australian pines (*Casuarina sp.*) and Brazilian pepper (*Schinus terebinthifolius*) in disturbed areas along unpaved road.

Exotic Vegetation Removal and Control: The initial cost of exotic removal is yet to be determined as the full extent of exotic infestation is unknown but appears limited to disturbed uplands and roadways. Total initial removal costs would be approximately \$600 per acre and involve approximately 222 acres, for a total potential cost of approximately \$133,000. this could be less if exotics are localized to a few areas or more if exotics are difficult to access. Costs for follow-up maintenance, done anywhere from quarterly to annually have been estimated at \$450 per acre, per year for a total of \$10,000 for 222 acres. These costs would likely decrease over time as the soil seed bank is depleted. RBNERR has indicated an interest in pursuing a management partnership, which could reduce costs for exotic removal through economies of scale.

Public Parking Facility: The property would require an area for visitor parking. The cost of construction of a shell or gravel parking lot to accommodate approximately 10 cars would be approximately \$15,000. Associated costs could include

- Land clearing
- Design
- Permitting costs

Public Access Trails: There are limited opportunities for hiking due to wet conditions. Future management could include construction of a boardwalk or observation platform.

Security and General Maintenance: Based on aerial observations, there appeared to be some minimal ATV activity. Dumping of solid waste was observed during flyover and ground site visit. Cleanup and fencing of access roads may be appropriate.

Table 4. Summary of Estimated Management Needs and Costs

Management Element	Initial Cost	Annual Recurring Costs	Comments
Exotics Control	\$133,000	\$10,000	Few exotics observed from the air; These costs are estimations only
Parking Facility	\$15,000.	t.b.d.	Future determination
Access Trails	n/a	n/a	No access at this time and trails are not appropriate due to wetland nature of parcels
Fencing	\$2,000	t.b.d.	2 Gates for access from Curcie Road
Trash Removal	t.b.d.	n/a	Dumping of solid waste was observed.
Signs	\$2,000 \$750	t.b.d.	Main gate sign off Curcie Road \$2,000; Interpretive signs 3 @ \$250 each
Total	\$152,075	\$10,000 +	Estimated values

Folios - Various

Date: October 9, 2006

t.b.d. To be determined; cost estimates have not been finalized.

V. Potential for Matching Funds

Folios - Various

Date: October 9, 2006

The primary partnering agencies for conservation acquisitions, and those identified in the ordinance are the Florida Communities Trust (FCT), The Florida Forever Program and the Save Our Rivers Program. The following highlights potential for partnering funds, as communicated by agency staff:

Florida Communities Trust:

Potential does exist for a grant; however, these grants are offered on a yearly cycle and are rarely coordinated with purchases to provide up-front partner funding. Application is typically made for pre-acquired sites. Each recipient is limited to a maximum of ten percent (10%) of the available bond proceeds. For the 2006 funding cycle the award limit per recipient, per cycle, was \$6.6 million. Multiple applications may be made, as long as the total amount requested does not exceed the 10% award maximum. If only one application is submitted from Collier County as a whole, a \$9.9 million award is possible. The next funding cycle closes in June of 2007. Collier County, with a population exceeding 75,000, is required to provide a minimum match of twenty-five percent (25%) of the total for each project cost.

A cursory test scoring of this parcel with FCT criteria by staff gives this parcel a score of **100** out of a possible 320 points. Staff was verbally advised that if a score is under 125, chances of it being selected for funding are not likely. This parcel appears to be below the minimum mark to hold at least some hope for possibility of selection for FCT post-acquisition funding.

Florida Forever Program:

Staff was verbally advised that the Florida Forever Program is concentrating on larger, more rural parcels, unless those parcels are inside an existing acquisition boundary. These parcels are not inside a Florida Forever project boundary.

Save Our Rivers Program / South Florida Water Management District:

SFWMD staff has advised that none of these parcels are within a SFWMD project boundary and funding partnerships are unlikely unless that is the case.

Other Potential Partner Funding Sources

Rookery Bay National Estuarine Research Reserve (RBNERR) currently has a grant from U.S. Fish and Wildlife Service (USFWS) for land acquisition and willing to partner for acquisition with these funds. The grant funding expires in November, however, and RBNERR is requesting an extension of the funding. Staff has advised, however, that an extension is not likely. RBNERR has agreed to partner for management purposes. USFWS is interested in partnering by providing law enforcement support for public access. In order to do this, however, the area must be placed within a federal holding boundary.

VI. Summary of Secondary Screening Criteria

Folios - Various

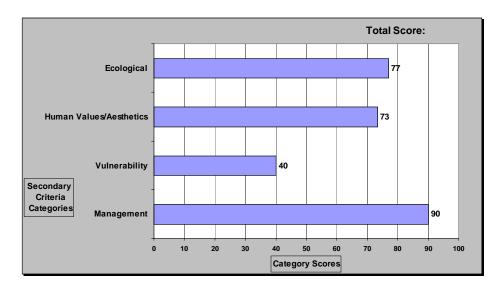

Date: October 9, 2006

Staff has scored property on the Secondary Criteria Screening Form and attached the scoring form as Exhibit E. A total score of **280 out of a possible 400** was achieved. The chart and graph below show a breakdown of the specific components of the score.

Table 5. Tabulation of Secondary Screening Criteria

Secondary Screening Criteria	Possible Points	Scored Points	Percent of Possible Score
Ecological	100	77	77%
Human Values/Aesthetics	100	73	73%
Vulnerability	100	40	40%
Management	100	90	90%
Total Score:	400	280	70%
Per	cent of Maxi	mum Score:	70%

Figure 4. Secondary Screening Criteria Scoring

Summary of factors contributing to score

Folios - Various

Date: October 9, 2006

<u>Total Score – 280 out of 400</u> <u>Ecological: 77 out of 100</u>

The parcels scored above average in this category. At least 4 FLUCCS native plant communities are present, and perhaps 5. One of the communities is among the targeted types – High Saline Marsh. The area contributes to surficial aquifer recharge, connects hydrologically with the Gulf of Mexico, contains wetlands and mapped soils are 100% depressional or tidal. Listed species utilize the area and minimal alteration, besides removal of exotics is needed to restore high ecological function.

Human Values/Aesthetics: 73 out of 100

A high score in this category is due to having access from a paved public road to at least a portion of the area, the potential for multiple opportunities for natural resource-based recreation, including photography, bird watching, kayaking, canoeing and fishing. It lost some points because only a small portion is visible from a public thoroughfare.

Vulnerability: 40 out of 100

This area is zoned agricultural and is within an area designated as Conservation on the Future Land Use map of Collier County. That means it is vulnerable to development of 1 single family home per 5 acres, or a total of 44 homes or could be used for bona fide farm operations as allowed by the Florida Right To Farm Act. Realistically, lack of access and presence of coastal wetlands would make this area very difficult and expensive to develop.

Management: 90 out of 100

The parcels scored very high in this category because there are no known hydrologic changes necessary to sustain site qualities, an aerial examination and site visit to one area showed that the infestation is not severe, the area requires minimal maintenance and management and Rookery Bay is willing to provide day-to-day management under a shared cost agreement. This would allow for economies of scale in management costs.

<u>Parcel Size:</u> Parcels range from 2 to 80 acres with the entire project area reaching 400 acres. While parcel size was not scored, the ordinance advises that based on comparative size, the larger of similar parcels is preferred. These parcels are similar to but slightly exceed the size of the Hamilton property, which is 194 acres. In the McIlvane Marsh area, 222 acres have been offered. Both properties are surrounded by state and federal lands.
